Gallery References Category:AutodeskQ: How to execute a function when a link is clicked on an iframe I have an iframe that has some links on it. In order to be able to execute a function when the links are clicked on, I've added an onclick event to the links inside of the iframe: onclick="functo();" And in the parent window: function functo() { window.location.href = 'url'; } When I click on the links, the parent window is redirected to the 'url' but the function I've passed to the 'onclick' event is not executed. Is this the correct way to execute a function when a link is clicked on an iframe? A: You will have to do it slightly differently. You need to add an onclick event to the links inside the iframe. Then, you will be able to capture the click on the link, and have a JavaScript function execute. I just did it on a test page and it works. It seems that you can do it on a link tag. Test
